

Protocol to Prevent Vaccine Damage

I recommend not giving any vaccines until we know whether or not RFK and his team are able to delay the enforcement of this NY vaccine mandate.

Attached are general recommendations to help prevent any problems from vaccines. Below are 2 remedies to order from Weleda and 4 remedies to order from Uriel.

Please order from Weleda, 800-241-1030.

- Thuja D3/D15/D30 50 ml. drops
- Vaucheria D6 50ml drops

Order from Uriel, 866-642-2858

- Thuja thymus comp drops 60ml
- Silicea belladonna pellets - 1 bottle
- Apis belladonna pellets - 1 bottle
- Carbo sulfur powder - 1 bottle

For two weeks before and after each vaccine dose, take in the following order 5 to 7 drops 3x daily before breakfast or lunch, before supper and before bedtimes of:

1. Thuja thymus comp drops - Uriel
2. Vaucheria D6 drops - Weleda
3. Thuja D3/D15/D30 drops - Weleda

If fever or other symptoms of illness develop, at any time after vaccination, then continue the above 3 remedies 3x daily. And add the following 3 remedies until the fever and other symptoms have been gone for at least one week.

4. Uriel silicea belladonna pellets - Five pellets dissolved in mouth every hour if symptoms are acute/severe, decreasing to every 3 to 4 hours as symptoms improve.
5. Uriel apis belladonna pellets - Give along with #4 above in the exact same dose and frequency.
6. Uriel carbo sulfur powder - Give 1 pea-sized portion of powder along with #4 and #5 above, but not more often than 3 or 4 times daily.

The above guidelines and remedies will definitely help a child, teen or adult to tolerate and to detoxify from any vaccine that is given.
